Antibiotic Susceptibility - Gram Positive

% Susceptible

Isolates 2025	# Tested	AMPICILLIN	CLINDAMYCIN	CEFTRIAXONE[4]	CEFTRIAXONE[5]	DAPTOMYCIN	DOXICYCLINE	ERYTHROMYCIN	GENTAMICIN[3]	LINEZOLID	MOXIFLOXACIN	NITROFURANTOIN[1]	OXACILLIN[2]	PENICILLIN[4]	PENICILLIN[5]	PENICILLIN[6]	TETRACYCLINE	TRIMETHSULFA	VANCOMYCIN
Enterococcus faecalis	**184**	98				100	28		86	95		99							97
Enterococcus faecium	**11**	27				0	**27**		**100**	100		55							**36**
*Staphylococcus aureus**	**219**		78			100	95	57		100	77	100	76				90	95	100
Staphylococcus coagulase negative	**132**		72				90	**60**		100	**81**	98	**62**				89	71	100
Streptococcus pneumoniae	**17**		82	75	**88**			**47**			100			**65**	94	**63**	**53**	76	100

*= Of the 216 strains of *S.aureus* 76% are MSSA and 24% are MRSA

1 = reported for urine isolates only

2 = Oxacillin susceptibility predicts susceptibility to most cephalosporins, carbapenems, & *B*-lactams/*B*-lactamase inhibitor combinations

3= Gentamicin susceptibility predicts synergistic bactericidal activity when used with a cell wall active agent that is also susceptible

4= percent susceptible using meningitis breakpoints

5= percent susceptible using non-menigitis breakpoints

6 = percent susceptible using oral form of drug

Bolded numbers indicate a greater than 10% change

>80% Susceptible - recommended

Antibiotic Susceptibility - Gram Negative

% Susceptible
